Guide diagram · shown at actual size

Page 1 of this PDF is the actual-size template (4.25" × 3.25").

DOCUMENT & SIZES

- Finished sheet (trim): 4.00" wide × 3.00" high.
- Standard imprint / safe area: 3.625" × 2.625", centered. Keep all text, logos, and important graphics at least 3/16" inside the trim.
- Full-bleed artwork: 4.25" × 3.25". Extend backgrounds, photos, and color fields 1/8" beyond the trim on every side.
- Allow for a slight cutting variance (about 1/16") by keeping critical content inside the safe area.

COLOR, TYPE & IMAGES

- Set up the file in CMYK. RGB artwork will be converted and colors may shift.
- Raster images (photos and other bitmaps) must be 300 dpi at final size.
- Convert fonts to outlines, or embed them in the PDF.
- Minimum type size: 6 pt. Minimum line weight: 0.5 pt (positive or reversed).

HOW TO USE THIS TEMPLATE

- Place your art on page 1, or create a new document at 4.25" × 3.25" (the bleed size).
- Guides are on a separate layer named "Guides." Hide or delete that layer, and do not include this instruction page, before you send the file.
- For a standard (non-bleed) imprint, keep everything inside the blue dashed area. For full-bleed designs, still keep type and logos inside the blue area, and only let backgrounds run to the red bleed edge.
- The adhesive strip is on the back of each sheet, along the top edge (marked on the template). There is no required no-print zone on the front of the sheet.

ACCEPTED FILE TYPES

- PDF (preferred), Adobe Illustrator (.ai), EPS, or PNG at 300 dpi.
- Send finished artwork to your sales contact, or email info@stickersandmore.com.
